

*Budget Narrative (Attachment 2)*

The Charlotte County Sheriff's Office Computer Crimes Unit has not only assisted in its own investigations but has used their limited resources to assist the State Attorney's Office, the Punta Gorda Police Department, the Federal Bureau of Investigations, and other counties as needed. Using these funds, the equipment requested will provide more efficient access to digital and electronic information stored on computers and mobile devices. Therefore, we respectfully request the following:

Equipment Cost	Quantity
FRED-L with Ultra Kit \$4999.00 FRED-L is a forensic laptop specially-designed with the processing power necessary to conduct forensic examinations in the field to acquire digital video and audio files.	1
PowerEdge 2900 Storage Server \$12060.00 With storage capacity on conventional computers topping one terabyte and the volume of data being retrieved from them, the PowerEdge 2900 Storage Server gives examiners the ability to store this information and provide systems backup.	1
FRED-SR Forensic Computer \$11499.00 FRED-SR is an all-inclusive system allowing the Computer Crimes Unit the ability to work on multiple forensic cases simultaneously, thus leading to quicker turnaround time for case closure.	1
JVC LCD Television \$799.00 The television and VHS/DVD combo are necessary to review videotapes and DVDs recovered during investigations. The items recovered may contain inappropriate or obscene material that must be viewed in a secure area, such as the forensic lab.	1
JVC VHS/DVD Combo \$270.00 See justification in JVC LCD Television.	1
Tripp Lite Smart Pro 2200 Net UPS Battery Back-ups \$3720.00 The battery back-ups are essential to the maintenance and stability of forensic operations. They have longer run time which will enable examiners to properly shut down systems in the event of a power loss.	6 @ \$620.00

Movincool Classic Plus 14 Portable AC Unit 1  
\$2995.00

Due to the amount of heat generated in the forensic lab by these systems, a portable AC unit will help keep the computers cool enough to perform efficiently.

The following items serve as a collection of cell phone forensic equipment intended to support a comprehensive forensic lab to extract data from cellular phones, PDAs, and RIM technologies:

- 1) .XRY Communication Hub 1  
\$7170.00  
This device allows for faster, more efficient examination of cellular phones, PDAs, and RIM technologies.
- 2) Paraben's Device Seizure with Toolbox 1  
\$1595.00  
This device provides, working with the .XRY, enhanced data acquisition of cellular phones, PDAs, and RIM technologies.
- 3) 1 Year Software and Tool Kit Subscription 1  
\$330.00  
Software license for the Paraben's Device Seizure with Toolbox.
- 4) MOBILedit Forensic 1  
\$395.00  
Complementing the .XRY and Paraben's Device, MOBILedit utilizes many of the cables and drivers necessary for forensic examinations, filling the gaps where the other systems leave off.
- 5) Oxygen Software 1  
\$695.00  
This software analyzes the data acquired from the hardware devices.
- 6) Secure View for Forensics 1  
\$1800.00  
This device provides phone support in acquiring photos from cellular phones, PDAs, and RIM technologies.
- 7) Neutrino for Encase Software 1  
\$1500.00  
This software provides access to the physical memory on the cellular phones, PDAs, and RIM technologies. The Encase Forensic software is what the Computer Crimes Unit uses for their examinations.
- 8) SIMIS 3G Lifetime License 1  
\$1850.00

SIMIS will provide access to read and recover information stored on the cellular phone's SIM card.

- 9) SIMulate Sim Duplication 1  
\$950.00  
This device can clone the original SIM card, thus using the clone for forensic analysis while maintaining the original evidence intact.
- 10) Ramsey RF Signal Blocking Box 1  
\$1450.00  
This storage box will block incoming signals to recovered cellular phones, PDAs, and RIM technologies allowing for forensic examination without new information coming in.
- 11) Stronghold RF Signal Block Bags 5 @ \$30.00  
\$150.00  
The Block Bags will be used for secure transport of retrieved cellular phones, PDAs, and RIM technologies.
- 12) Digital Intelligence Ultra Block Flash Card 1  
\$80.00  
The Block Flash Card allows for reading the information on the retrieved Flash Card without compromising the stored data.
- 13) iGo Charging 50 Tip Kit with 2 Wall & Port Charger 1  
\$560.00  
Allows for charging of cellular phones, PDAs, and RIM technologies.
- 14) Teel Tech Install Support and Updates 1  
\$500.00  
This will provide support of all equipment and items listed above.

TOTAL - \$55367.00
